ABOUT US

Zhejiang King-Mazon Intelligent Manufacturing Corp., Ltd. was established in 2003. It is a specialized company engaged in the research and development of pipeline fittings such as aerospace components, hydraulic systems, fuel systems, environmental control systems, heat exchanger tubes, evaporator spiral coils, precision instrument tubes, and high-end intelligent pipe forming equipment. Our business mainly involves high-end equipment and precision conduits in the fields of aviation, aerospace, aerospace, high-speed rail, nuclear power, ships, precision instruments, and new energy vehicles.

Our advantage

Technological achievements

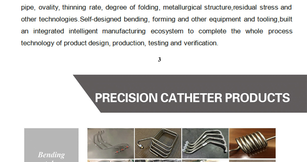

SCIENTIFIC PROWESS

Leading position in scientific research and technology

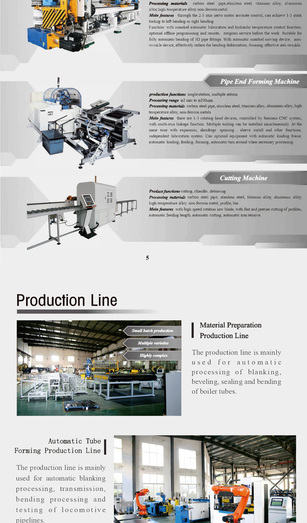

Zhejiang King-Mazon Intelligent Manufacturing Corp., Ltd. set up a research and development center and laboratory in 2003, studying the plastic forming mechanism of pipe, ovality, thinning rate, degree of folding, metallurgical structure,residual stress and other technologies.Self-designed bending, forming and other equipment and tooling,built an integrated intelligent manufacturing ecosystem to complete the whole process technology of product design, production, testing and verification.

PRECISION CATHETER PRODUCTS

INTELLIGENT EQUIPMENT PRODUCTS

Production Line

Material Preparation Production Line

The production line is mainly used for automatic processing of blanking, beveling, sealing and bending of boiler tubes.

Automatic Tube Forming Production Line

The production line is mainly used for automatic blanking processing, transmission, bending processing and testing of locomotive pipelines.

Intelligent Tube Forming Production Line

The production line is mainly used for the automatic processing of the whole process such as bending pipe, margin cutting and online detection of the aerospace pipe.
